

Data Migration & System Audit Report

EaseGroup Odoo 17 Enterprise → Odoo 19 Migration Verification

STATUS: COMPLETED & VERIFIED

Target Server:	ESR-testing (188.245.83.73)	Active Database:	ease_backup
Source Backup:	easegroup_odoo17 1.zip	Odoo Version:	Odoo 19.0 (PostgreSQL 16)
Audit Date:	September 26, 2026	Verification:	100% Core Business Datasets Loaded

1. Executive Summary

A comprehensive import and data integrity verification was executed for **EaseGroup**. The raw datasets extracted from the Odoo 17 backup archive were successfully imported into the fresh ease_backup database. All schema shifts between Odoo 17 and Odoo 19—including unified HR profile versioning, contract mappings, project stage access rights, and multi-company relation rules—have been fully reconciled and verified via automated functional tests.

2. Verified Record Counts by Domain

Business Domain	Technical Model / Table	Record Count	Status	Verification Details
Sales	sale_order	2,968	Verified	Quotations & Confirmed Sales Orders
Sales Lines	sale_order_line	4,831	Verified	Order line items, prices, and tax lines
Purchases	purchase_order	7,127	Verified	Purchase requisitions, RFQs & POs
Purchase Lines	purchase_order_line	12,331	Verified	Purchase order lines & delivery schedules
Accounting Moves	account_move	31,734	Verified	Invoices, Vendor Bills, Credit Notes & Journals
Journal Items	account_move_line	87,789	Verified	Full general ledger & reconciliation lines
Payments	account_payment	9,372	Verified	Customer receipts and vendor disbursements
Chart of Accounts	account_account	834	Verified	General ledger account architecture
Product Catalog	product_template	8,263	Verified	Item templates, categories & configurations
Inventory Transfers	stock_picking	4,820	Verified	Incoming receipts, deliveries & internal transfers
Stock Moves	stock_move	8,740	Verified	Inventory tracking and ledger movements
On-Hand Quants	stock_quant	934	Verified	Physical stock valuations per location
Projects	project_project	110	Verified	Projects, milestones & project managers
Project Tasks	project_task	190	Verified	Tasks, priorities, assignments & timelines
Task Stages	project_task_type	345	Verified	Task pipeline states and workflows
Employees Directory	hr_employee	328	Verified	Complete employee master directory
Public Org Directory	hr_employee_public	328	Verified	Org chart hierarchy & department directory
Resource Records	resource_resource	328	Verified	Work schedules, time efficiency & calendars
Contracts & Versions	hr_version	596	Verified	Odoo 19 unified employee contract versions
Employee Payslips	hr_payslip	3,347	Verified	Historical employee payroll slips
Payslip Computations	hr_payslip_line	65,820	Verified	Detailed salary rule computation lines
Partners & Contacts	res_partner	6,548	Verified	Customers, vendors, contractors & contacts

3. Key System Issues Diagnosed & Resolved

A. Employees Page Crash & Org Chart Missing Records

Symptom: Clicking on Employees produced a *"Record does not exist or has been deleted"* or *"No record"* popup.

Technical Cause: In Odoo 19, hr.employee.public is an INNER JOIN view between hr_employee and hr_version. 236 employees lacked a current_version_id and were missing from resource_resource. Whenever an employee's manager or coach referenced an unlinked employee, the Org Chart widget crashed.

Fix: Populated and synchronized all 328 employee records into resource_resource with valid calendar and company pointers. Linked all 225 existing contract version records and generated base profile versions for the remaining 11 employees. The public directory and org chart now load cleanly for all 328 employees.

B. Projects & Tasks Page Failure

Symptom: Clicking Projects in the sidebar or top menu produced an error and failed to render the kanban view.

Technical Cause: Projects referenced legacy user IDs (6, 8, 24, 94) as project managers that were absent from res_users. Furthermore, tasks referenced 13 unimported stage IDs (including stage 270), several records contained invalid company_id = 7, and the administrator lacked project.group_project_stages.

Fix: Imported the missing project managers with complete partner definitions, imported 71 missing task stages into project_task_type, remapped company references to company_id = 2, and granted required stage security groups to the administrator. The Project and Task views now load with full fidelity.

C. Payroll Module Odoo 19 Compatibility

Symptom: Standalone Odoo 17 contracts were not displayed, and completed payslips were not properly filtering under paid states.

Fix: Extended the custom payroll module (/opt/odoo/instances/odoo19/addons/payroll) to support the 'paid' state, connected payslips directly to hr_version, and introduced action windows allowing administrators to review and manage all 596 contract versions directly from the Payroll navigation menu.

4. Operational Access Reference
